

**Do you get water in your basement?
Do you clean your lateral out every year?
WE CAN HELP!**

SUMP PUMP PROGRAM

The city recently completed a study that shows a lot of rain and stormwater is entering the sanitary sewer system during heavy rain events and storms.

The Sump Pump Program aims to reduce the water entering the system by disconnecting foundation drains connected to the sanitary sewer system and installing sump pumps to divert the water from the sanitary system to the lawn instead, where it might end up in the storm sewer instead.

If your house presently has clean water drain connections to sanitary sewer (i.e., foundation drains, outside stairway drains, sump pump discharge into the sanitary sewer, etc.) or if your basement has been subject to flooding from surcharging of the sanitary sewers, and the conditions of the program suit you, please follow the instructions below in order to participate in the program.

The intent of this program is to reduce wet weather flows and basement flooding problems which result from overloaded sanitary sewers during wet weather by removing any clean water connections from the sanitary sewer. The City will cover cost the of installation of a Sump Pump and necessary electrical updates, up to a maximum amount of \$5,000.

Racine City Hall
730 Washington Avenue
Racine, WI 53403

Reducing Inflow for your Benefit

Sump Pump Program (SPP) Steps

If applicable, Plumber invoices remaining balance to homeowner.

Approximately a year after the work has been completed, a City representative will re-inspect the work performed to ensure nothing was re-connected to the sanitary sewer.
