Hi Ray, you wanted me to reach back to you if nothing has happened in 30 days, here I am. Just a side note to make sure my request is understood. In order for trucks to safely make the proper swing without running up on the curb and grass, that sign should be located to the east of the drive way, it's currently on the west side of the driveway.

The sign is on the north side of the road (Melvin Ave).

Hi Ray, wondering who I can speak with regarding current parking restrictions on Melvin Ave., immediately to the north of Gardtec. I see that certain sections do not allow for day time parking, while other sections do not have restrictions. The problem we face on a daily basis, and much more during the winter months, is that large semis are not able to back into driveway and make that wide swing if cars are parked on the road right outside of our driveway. If a rather small section could be included into the no parking area, it would solve this issue.
