Re: Request to Lift Sewer Moratorium-Meter Area 12
Village of Mount Pleasant

Dear Commissioners,

As you aware, the Racine Wastewater Utility has been working diligently to complete construction of the LS02 Storage Basin along Spring Street, preceded by the relaying of Racine Wastewater interceptor sewers upstream of this facility. This construction is taking place to prevent basement backups and bypassing caused by surcharging of the collection system in this area, and to create more conveyance capacity for both the Mount Pleasant and the City of Racine's sanitary sewer collection systems that are tributary.

This work was designed to provide reasonable and essential protections against sewer system surcharge so that sewage flows from both Mount Pleasant and the City of Racine could be adequately accommodated by the Racine Wastewater Utility's interceptor system and so that nearby homes, businesses and the environment were protected to a significant degree.

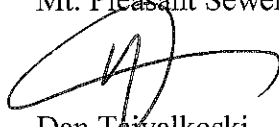

The Cost of Service Study that governs the cost sharing for this project was split between Mount Pleasant and the City of Racine, as the two entities contributing flows to this part of Racine Wastewater's system. The storage basin and associated interceptor relays were designed to accommodate an agreed upon design storm which would allow both affected municipalities to realize adequate conveyance capacity to put them into compliance with their respective allocated thresholds within the Sewer Agreement.

Once the storage basin is functional, we are hereby requesting that the Racine Wastewater Commission take formal action accepting the Village of Mount Pleasant's request to lift the sewer connection/extension moratorium in Meter Area 12.

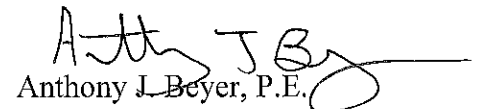

As you know, we have taken significant steps over the last five years to eliminate I/I into the Mount Pleasant collection system. We are committed to continuing to take the problem of inflow and infiltration into our collection system as a very serious issue and we have, and plan on continuing to be, very aggressive in our attempts to mitigate I/I.

Please contact us if you have any questions at (262) 664-7800.

Sincerely,
Mt. Pleasant Sewer Utility District #1

Dan Tairvalkoski
