LETTER FROM THE PUBLIC HEALTH ADMINISTRATOR

COVID-19 is the most significant threat to public health and economic viability since the Spanish Flu pandemic of 1918. Federal, state, and local leaders have taken unprecedented measures to protect their communities, such as the closing of schools and businesses, banning of large gatherings, and placing residents under shelter-at-home orders. While these interventions have slowed the spread of COVID-19, they have also had wide-ranging effects on the local economy and social well-being of communities across the US and globally.

As we move towards reopening businesses and resuming activities within our communities, public health professionals and community leaders must make informed but difficult decisions on how and when to modify existing State Orders; weighing the economic cost of prolonged mitigation measures against a second wave of the virus. Until effective treatment or a widely-distributed vaccine becomes available, the threat of continued expansion of the viral disease is very real.

This document reflects the thoughtful consideration given to balancing economic interests within the community against the needs of public health. Pursuant to Wis. Stat. § 252.03(1) and (2), provides broad authority and power for local health officials to prevent, control, and suppress COVID-19; provides that every local health officer “shall promptly take all measures necessary to prevent, suppress and control communicable diseases”; provides that local health officers “may do what is reasonable and necessary for prevention and suppression of disease”; and provides that local health officers “may forbid public gatherings when deemed necessary to control outbreaks or epidemics”.

This **Public Health Reopening Order** specified within will be **in full force and effect on Tuesday May 26, 2020 at 8:00 a.m. subject to the jurisdictional limits of the City of Racine Public Health Department**, including the fifth most populous city within the State of WI. While the metrics and data used to derive this approach will be closely followed and the overall Forward Racine strategy reevaluated by this Department on June 30, 2020, it is anticipated that each Racinian will take personal responsibility for their behavior and health as this pandemic continues to evolve.

This strategy is intended to prevent community transmission and protect those most vulnerable, while reducing the economic and social fatigue resulting from the current pandemic. In order to sustain the health and welfare of our citizens it must also ensure that steps are taken to alleviate the strain on public health, health care systems, and emergency response services in order to ensure and preserve their ability to respond in a timely manner to current and future threats, while maintaining capacity to treat those impacted by COVID-19. This reopening strategy, while tailored to local conditions, builds upon recommendations developed by federal and state entities such as the Centers for Disease Control and Prevention, State of WI Badger Bounce Back plan and Wisconsin Economic Development Corporation (WEDC) Reopen Guidelines. These recommendations and guidelines are accessible through hyperlinks provided in this document.

As we progress through this pandemic, questions on the implementation of this strategy and how it affects specific organizations can be directed to the City of Racine Public Health Department at 262-636-9201. In addition, enforcement concerns and complaints can be forwarded through City of Racine Crime Stoppers by telephone (1-888-636-9330), text message [RACS to 274637(crimes)] or website (www.racine.crimestoppersweb.com).

There is no guidebook informing communities on how to eliminate this threat to the public, only our ability to aggregate and analyze data in real time, request additional resources for front line personnel, and advocate for the expansion of pharmaceutical and vaccine research and development. In the meantime, each of us needs to be responsible and respectful of each other.

Stay Well.

Dottie-Kay Bowersox

FORWARD RACINE PURPOSE

Without effective treatment or a widely distributed vaccine, the COVID-19 pandemic is likely to continue in the coming months to years. Without duly considered and well-crafted mitigation strategies, the significant health and economic consequences we are currently experiencing are unlikely to disappear. Thus, the goals of the strategy presented in this document are to:

1. Reduce the number of people who are exposed to and subsequently contract COVID-19
2. Reduce the number of people who are hospitalized due to COVID-19

Non-pharmaceutical community strategies slow the spread of COVID-19. Contact tracing, isolation, quarantine and, most notably, strict social or physical distancing resulting from public health orders like Safer at Home have saved lives. However, these prevention strategies have come at a significant cost to the local economy as well as separating us from family, friends, neighbors and colleagues.

While we are all anxious to reopen businesses and resume daily activities, reopening too quickly or without tools in place to slow the spread of the virus could threaten the progress made to date, resulting in greater health and economic consequences. The strategies presented in this document are designed to aid city officials and all who live, learn, work, pray, and play in the City of Racine, as well as Villages of Wind Point and Elmwood Park, in reopening businesses and resuming community-level activities incrementally, as well as considering when and what mitigation strategies may be needed if conditions worsen. This document is not meant to replace state or federal guidance. Rather it complements and incorporates, recommendations, guidance criteria and core responsibilities contained within them, including the Wisconsin Department of Health Services' Badger Bounce Back Plan and Wisconsin Economic Development Corporation' Focus Forward - Reopening Guidelines.

While the reopening strategy presented in this document appears linear, i.e. moving from current day to easing restrictions (May 26, 2020) to evaluation (June 30, 2020) as a function of chronological time, it is difficult to predict the behavior of the virus that causes COVID-19. As restrictions are loosened and more testing occurs there may be an increase (peak) in the number of confirmed cases (Figure 1). These cases may rise and fall in waves. Depending on the rate and frequency at which this occurs, policies enacted may need to follow a similar pattern, e.g. returning to more restrictive levels to ensure that achievements attained are not lost, as they reflect a loss in both life and livelihood for our citizens. Preventing a resurgence of COVID-19 also ensures our health care system, public health agency and emergency response services have the ability to react without exceeding their capacity to do so. Forward Racine was developed with this in mind.

Adequate and equitable access to health care is a basic human right. The COVID-19 pandemic highlights the fact that some segments of the population are being disproportionately impacted. While this trial may bring us together against a common enemy, we must not lose sight of our obligations to address this disparity in less trying circumstances. We are one community and because of our diversity, are better and stronger together.

Reopening Strategy for Pandemics

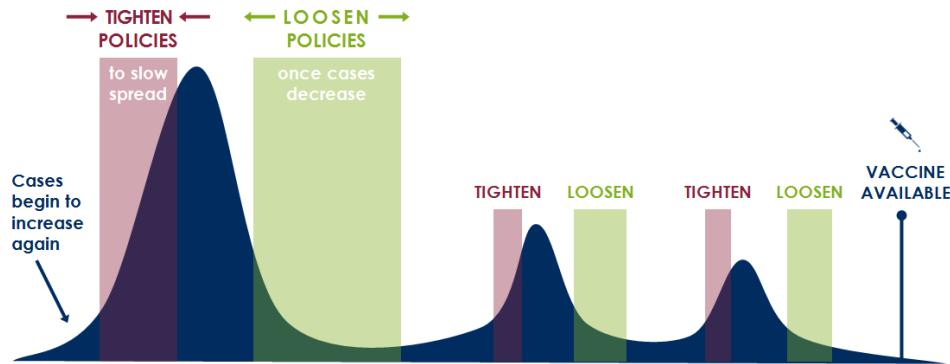

Figure 1. Evolution of reopening strategies as pandemic progresses (Public Health Madison & Dane County, 2020).

RESPONSIBLE ENTITIES

PUBLIC HEALTH

Public health professionals have the responsibility of tracking the virus and balancing a community response.

- ✓ Receive positive test results and conduct contact tracing
- ✓ Ensure quarantine and isolation
- ✓ Identify and implement population-level mitigation strategies and provide guidance for the reopening of the community, aligning with state and federal plans
- ✓ Provide technical assistance to businesses and individuals to implement best practices and contain outbreaks
- ✓ Report progress and local data
- ✓ Identify inequities and manage proactive response to managing spread of disease
- ✓ Facilitate community testing and future vaccination opportunities

HEALTH CARE SYSTEMS

Health care systems diagnose and provide supportive treatment.

- ✓ Identify positive COVID-19 cases through testing; minimally testing symptomatic individuals and contacts of positive cases
- ✓ Collaborate with public health and local businesses to test other emerging populations
- ✓ Develop plans and increase overall surge capacity
- ✓ Utilize infection control procedures to screen and test health care personnel for COVID-19 and mitigate its spread

EMERGENCY RESPONDERS

Emergency responders provide a critical buffer between health care systems, businesses, and community members.

- ✓ Communicate, educate, and potentially enforce public health emergency orders
- ✓ Engage the public by responding to emergency calls
- ✓ Ensure the safety of the public during socially and economically challenging times

BUSINESS COMMUNITY

The business community plays a critical role as the driver of our economy.

- ✓ Protect the health and safety of employees and customers
- ✓ Develop flexible policies to ensure employees can work from home when necessary or stay home when ill
- ✓ Monitor employees for symptoms and work with local public health when an employee is diagnosed with COVID-19 or is a known contact
- ✓ Implement CDC recommendations for safe business practices, e.g. frequently disinfecting surfaces, maintaining 6 feet physical distancing, hand washing, and other prevention measures
- ✓ Communicate to management, employees, and customers the importance of following prevention measures in order to build consumer confidence

COMMUNITY MEMBERS

Everyone shares the burden of keeping our community safe.

- ✓ Practice good hygiene, including washing hands with soap and water for at least 20 seconds and covering coughs and sneezes with a tissue or into an elbow
- ✓ Stay home when ill
- ✓ Call primary care provider for testing, if ill or exposed to someone who has COVID-19
- ✓ Clean high-touch objects like doorknobs, remotes, cell phones, and light switches frequently
- ✓ Follow public health recommendations and population-level prevention strategies, such as maintaining physical distancing and wearing cloth face coverings

FORWARD RACINE METRICS

In order to reopen, four types of data need to be examined:

1. **Epidemiology:** Is there a sustained decrease in the number of positive tests and/or cases?
2. **Health care System:** Is the health care system able to provide consistent levels of diagnostic testing and maintain surge capacity?
3. **Public Health:** Are infections contained, e.g. is community spread being controlled?
4. **Resources:** Is the PPE supply chain robust enough to meet the needs of the healthcare system and public health?

EPIDEMIOLOGY

The number of cases of COVID-19 within the community must be low enough that the health care system and public health can swiftly respond to limit the spread of disease within the community. This is a critical threshold for reopening. This data aligns with the progression of the epidemic towards an overall lowering of the number of confirmed cases per 100,000 residents.

Where we are today: There have been over 700 cases of COVID-19 in the City of Racine Public Health jurisdictions since March 18, 2020. The number of positive tests, as a proportion of total tests performed, ranges from 12 – 41%. The percentage of positive tests has continued to increase since May 1st. The 5-day rolling average, calculated since mid-May 2020, ranged from 18 - 32%. The case rate in the City of Racine Public Health jurisdictions is currently 969 per 100,000 residents which is a measure to compare populations of different sizes.

HEALTH CARE SYSTEM

A sustained level of diagnostic testing is required in order to identify active cases of COVID-19 infection within the community, which leads to contact tracing and prevention of further disease transmission. Alongside testing to monitor the course of the epidemic, it is vital that health care systems are equipped to manage patient care in the context of a surge caused by COVID-19. Identifying if hospitals are operating outside of crisis care, one of our metrics, is relevant to ensuring health care capacity. Robust testing of health care workers, to ensure a sustained workforce is also vitally important for maintaining capacity.

Where we are today: Hospital capacity and testing of health care workers are strengths in City of Racine. Health care systems are currently prepared to implement crisis care and have adapted current standards of care to meet present needs. At this time, their capacity to provide care has not been outpaced. However, we remain concerned that if the current rate of infections continues, or increases, the hospital systems surge capacity to manage positive cases and effectively treat those who need hospitalization will be exceeded. Screening of health care workers for new cases will need to be continued to ensure robust staffing is available to respond to a surge in cases. Consistent diagnostic testing services are available.

PUBLIC HEALTH

The third aspect of disease containment is the ability to identify probable cases and isolate individuals with positive diagnoses in order to prevent community spread. Through rapid contact tracing, public health can identify and notify contacts who have been exposed. Positive cases and contacts are isolated or quarantined and receive education for the duration of their infectious period which reduces transmission. Working closely with long-term care settings to implement protective measures and policies will slow the spread of COVID-19 in vulnerable populations.

Where we are today: Contact tracing is the most effective but challenging means to reducing the spread of the disease. The vast majority of individuals who have a positive diagnosis are contacted by public health personnel within 48 hours of their positive test results being reported; isolation and quarantine facilitated. Probable cases are also identified. However, challenges exist as a result of limited resources and unequal impact of COVID-19 on communities of color due to severe socio-economic disparities. The Public Health department has personnel limitations, operating at a capacity much less than industry standards, which creates significant challenges in meeting the increased needs associated with contact tracing, education, awareness, and enforcement activities. Long-term care settings have implemented

protective measures and policies in consultation with public health. An expansion of community test sites will provide additional information on the prevalence of COVID-19 within the community.

RESOURCES

The fourth aspect of disease containment is the availability of personal protective equipment (PPE) necessary to protect the health care, emergency responder and general workforce in the context of patient encounters. In order to maintain a robust workforce there must be an adequate supply of surgical masks, N95 respirators, gowns, gloves, hand sanitizer and disinfectant products to control the spread of COVID-19.

Where we are today: Although there has been some relief with respect to the procurement of PPE and disinfectants, the supply is not yet sufficient to meet the needs of all general public and partner agencies

FORWARD RACINE METRIC STATUS

Active monitoring of real-time data-based metrics is critical. If metrics are not being met, mitigation strategies may be altered at the local level to address an identified hotspot. These metrics are reviewed regularly and will continue to be monitored by local officials. The data displayed below are only valid at the time of publication, but updates will be posted on [Racinecoronavirus.org](https://racinecoronavirus.org).

	Category	Measure	Threshold Metrics	Status
Epidemiology	Cases	Low incidence (%) of positive tests over last 14 days.	Green: <10% of tests positive Red: >10% of tests positive	
	Cases	Declining 5-day rolling average over last 14 days.	Green: Decline in 5-day average Red: No change / increase in 5-day average	
Health Care	Hospital Capacity	Treat all patients without crisis standards of care.	Green: Hospital affirms that they can treat all patients without crisis standards of care Red: Hospital affirms that they cannot treat all patients without crisis standards of care	
	Diagnostic Testing Capacity	Stable or decreasing numbers of infected health care workers over last 14 days.	Green: Testing available. No significant increase in health care worker infections over last 14 days Red: Testing insufficient or unavailable. Significant increase in health care worker infections over last 14 days	

Public Health	Contact Tracing	Majority of positive cases reported and contacted quickly (48 hrs) to facilitate isolation and quarantine in last 14 days.	Green: >85% of all new cases Red: <85% of all new cases	
	Community Spread	Long-term care facilities are implementing protective measures and policies for handling COVID-19 cases.	Green: All facilities have implemented protective measures and policies for handling COVID-19 cases (staff or clients) Red: Not all facilities have implemented protective measures and policies for handling COVID-19 cases (staff or clients)	
	Surveillance	Stable or decreasing number of probable cases in last 14 days.	Green: No significant increase Red: Significant increase	
Resources	Personal Protective Equipment (PPE)	Availability of supplies to local jurisdictions and health care systems.	Green: Supply chain sufficient to meet needs Red: Needs not being met	

WHY A CRITERIA-BASED APPROACH TO REOPENING IS IMPORTANT

The science surrounding the virus responsible for COVID-19 is evolving. Research has shown that the aerosolized droplets generated by coughing and sneezing from a person with COVID-19 are highly effective routes of disease transmission. Emerging research also suggests that droplets generated by vocalization (such as loud speaking or singing) in pre-symptomatic and asymptomatic carriers may be an additional mode of disease transmission. Once generated, viral particles may be maintained in the air for a period of up to 3 hours and on surfaces, such as cardboard, plastic and metal for up to 4 days.

It is this science that serves as the basis of the City of Racine Public Health Department's approach to reopening. Crowded restaurants, open work spaces, contact sports, indoor facilities where physical distancing is a challenge, and activities with deep breathing (such as singing) are inherently more prone to facilitate the transmission of COVID-19, particularly when an infected person does not have symptoms. Recent data has also identified communities of color as being disproportionately impacted by COVID-19. A rush to reopen risks furthering inequities if people are placed in unsafe conditions.

Supporting a careful, thoughtful approach to reopening will minimize exposure risk to the greatest extent possible while supporting the economic interests of the community. Under Safer at Home, physical places

or activities more prone to facilitate the transmission of the virus that causes COVID-19 were restricted. Reopening of those businesses and reintroduction of those activities must be approached in a manner that allows local officials to ensure that limited public health resources are still able to identify and contain the increase in cases that are likely to result from a greater number of people being exposed during reopening activities.

If a significant rise in cases, hospitalizations, and deaths result from reopening activities, a distinct possibility exists that more restrictive policies will need to be maintained, without linear progression. That decision, when/if necessary, will be made using the best available data and evolving science, with the best interest of the community's health in mind, while understanding the economic and emotional impact. Not taking these actions will result in a cascade of events that will plunge the City of Racine into greater economic and social chaos than experienced to date; businesses will collapse without a stable workforce and steady stream of confident and financially capable patrons. Loss of family, friends, neighbors, and colleagues will tear at the very fabric of our multicultural community, extinguishing lives not lived to their fullest, quelling the exchange of ideas and inhibiting revival of this vibrant community.

PUBLIC HEALTH REQUIREMENTS

All institutions and/or businesses must follow the identified materials below for compliance with the emergency public health order. The reopening strategy is not meant to be exhaustive and was written with the understanding that considerations may need to be given to unique, extenuating circumstances beyond a business or other public/private entity's control. These standards were based on, but modified from the Badger Bounce Back plan and Wisconsin Economic Development Corporation (WEDC) Reopen Guidelines for COVID-19.

1. Follow Centers for Disease Control and Prevention (CDC) guidance and recommendations relating to disease prevention measures, including the use of face masks or cloth face covers, social distancing, and proper cleaning and sanitation. Resources are available here:
 - [Hygiene and sanitation](#)
 - [Respiratory etiquette and prevention measures](#)
 - [Personal care and coping](#)
 - [Work place protections, as described for specific industries](#)
2. Businesses operating multiple services must comply with the individual criteria established for each unique service (i.e. *bar or restaurant components*). Where there are conflicting specifications, the most restrictive applies. Reopening guidelines may be re-evaluated with respect to the emergency public health order.

Wisconsin Economic Development Corporation (WEDC) Reopen Guidelines

- | | |
|---|---|
| i. General Guidance (All Businesses) | ix. Manufacturing |
| ii. Agriculture | x. Outdoor Gatherings |
| iii. Childcare Centers (Dept. of Children and Families) | xi. Outdoor Recreation |
| iv. Construction | xii. Professional Services |
| v. Entertainment & Amusement | xiii. Public Facilities |
| vi. Gyms & Fitness Centers | xiv. Restaurants |
| vii. Hair & Nail Salons | xv. Retail |
| viii. Hospitality & Lodging | xvi. Transportation |
| | xvii. Warehouse/Wholesale Trade |

3. Businesses must ensure that provided reopening strategies are not to be construed as superseding state statutes and/or local licensing or permits issued.
4. Specifications for Faith-Based Services, Religious Entities, Places of Worship, and Indoor Places of Arts, and Culture (such as movie & other theaters, social clubs, and museums).
 - ***For buildings with less than or equal to 50,000 square feet of public space:*** the maximum number of people allowed is equal to 25% of the space's occupancy load, including personnel, if social distancing can be maintained.
 - ***For buildings with more than 50,000 square feet of public space:*** the maximum number of people allowed is 4 per 1,000 square feet, excluding personnel, if social distancing can be maintained.

ENFORCEMENT

As we progress through this pandemic, questions on the implementation of this strategy and how it affects specific organizations can be directed to the City of Racine Public Health Department at 262-636-9201. Enforcement concerns and complaints can also be forwarded through City of Racine Crime Stoppers by telephone (1-888-636-9330), text message [RACS to 274637(crimes)] or website (www.racine.crimestoppersweb.com).

This order is enforceable by the City of Racine Police Department and City of Racine Public Health Department; violation or obstructions of this order is punishable under City of Racine Code of Ordinances.

FORWARD RACINE STRATEGY

Public Health requirements for all institutions, businesses, and community members:

1. **Written and implemented hygiene policy and procedure that includes:**
 - a. Ensuring employees who have a fever of 100.4°F or greater or other symptoms of COVID-19 will not be allowed to work.
 - b. Hand washing expectations and supplies available for staff
 - i. 20 seconds using soap and water as frequently as possible or using hand sanitizer with at least 70% alcohol content
 - c. A posted description of proper cough and sneeze etiquette
2. **Written and implemented cleaning policy and procedure that includes:**
 - a. Cleaning and disinfecting frequently touched surfaces multiple times a day
 - b. Frequently wiping down any shared equipment, such as work spaces, credit card machines, lunch room items, carts, baskets, etc.
 - c. Cleaning of common areas and equipment between users or at shift changes.
 - d. Protocols to clean and disinfect in the event of a positive COVID-19 case
3. **Written and implemented protective measure policy and procedure that includes:**
 - a. Ensuring people are at least 6 feet from others.
 - b. Ensuring employees are provided with and wear face coverings when unable to maintain at least 6 feet from others.
